KickStand
\$74.99/each

The KickStand is a heavy microphone boom-arm isolator that combines a massive stabilizing base with an isolation pad to eliminate resonance from the stage, drum riser and studio floor from entering the microphone. The innovative laser cut steel platform is wedge shaped to eliminate standing waves while offering sufficient height to allow a boom-arm to be articulated into the ideal position. The added mass stabilizes the microphone capsule for greater clarity and improved transient response while a thick, high-density acoustic foam isolation pad eliminates the resonance. Microphone Boom not included.

Kick Drum

Guitar Amp

Upright Bass
